

# Kyle Jussab | Gameplay Developer & Creative Technologist

626-773-0821 | Los Angeles, California | [kylejussab@gmail.com](mailto:kylejussab@gmail.com) | [kylejussab.com](http://kylejussab.com) | [linkedin.com/in/kylejussab](https://linkedin.com/in/kylejussab)

## Skills

---

**Languages & Frameworks:** C#, C++, JavaScript, TypeScript, GDScript

**Developer Tools:** Unity, Godot, Git, Visual Studio, GB Studio

**Gameplay:** Combat Systems, Player Abilities, Enemy Behaviors, State Machines, Prototyping

## Experience

---

**Snap Inc.** | Software Engineering Intern | UX Platform | Santa Monica, CA June 2025 - August 2025

- **Implemented and shipped** a user-facing interactive feature in a large-scale production codebase using Snap's **internal TypeScript** framework.
- Collaborated closely with designers and engineers to **iterate** on feature behavior and usability, advancing the work into live A/B testing.
- Took on additional engineering tasks beyond the core intern project, contributing to backlog items and helping the team meet production milestones.

**Snap Inc.** | Software Engineering Academy Scholar | Santa Monica, CA June 2024 - August 2024

- Selected as **1 of 60** scholars (with a **6%** acceptance rate) for the Snap Engineering Academy, focusing on full stack programming with HTML, CSS, JavaScript, and React to develop web and mobile applications.
- Collaborated with a **cross-functional team** to develop Give Fund, a feature aimed at helping foster youth nonprofits raise funds. Led the programming efforts by building animations, chats and notifications, constructing the profile section page, and contributing to the backend database architecture. Successfully pitched the project to **8** executives and an audience of **250+** members during the final showcase.

## Projects

---

[The Last of Us: The Last Stand](#) | Godot, GDScript

- Designed and implemented the core turn-based card combat system, including modifiers, status effects, and dynamic state changes.
- Built scalable gameplay logic supporting multiple playstyles, focusing on clarity, balance, and extensibility.
- Iterated on mechanics through playtesting, tuning rules and values to improve pacing and player decision-making.

[The Last of Us: Between the Years](#) | GB Studio, GBVM

- Developed a combat and crafting system including weapon switching, dashing, and upgrades to enhance gameplay depth.
- Focused on moment-to-moment gameplay feel, responsiveness, and player choice within hardware constraints.
- Achieved over **8,100** views and **1,800** downloads on itch.io, representing a **~23% conversion rate**, an exceptionally high figure compared to typical platform averages.

[CPU City](#) | Unity, C#, Git, Visual Studio

- Implemented core gameplay systems such as quests, interaction, hydration, scoring, and timing mechanics.
- Collaborated with a small team to iterate on mechanics based on playtesting feedback, increasing engagement and replayability.
- Contributed to overall game direction and UI design, helping achieve high satisfaction ratings during testing.

## Education

---

**Bachelor of Science in Computer Science** | University of London, Goldsmiths

**Associate of Science in Game Design and Development** | Pasadena City College
